

Table of Contents

A.	<u>Methodology</u>	
B.	<u>Results of Survey (All respondents)</u>	
	I. Background Information on Survey Sample	
	<u>Silicon design styles used</u>	3
	<u>Complexity of IC/ASIC designs</u>	4
	<u>Smallest process geometry for IC/ASIC designs</u>	9
	<u>Operating system environment installed on EDA platforms</u>	11
	<u>Hardware Description Languages (HDLs) used</u>	11
	<u>Primary line of business</u>	12
	<u>Other lines of business</u>	13
	<u>Total employees per company</u>	13
	II. Design Technology Investment	
	<u>Total number of EDA software developers and support engineers distributed throughout the company</u>	13
	<u>Total number of EDA software developers and support engineers and managers within central CAD group among companies that have a central CAD group</u>	13
	<u>Total number of design engineers across company supported by EDA engineers</u>	14
	<u>Total number of design groups across company supported by EDA engineers</u>	14
	<u>Design Productivity</u>	14
	<u>Investment per year per engineer</u>	14
	<u>Allocation of total corporate EDA budget in 2001 and 2002</u>	15
	<u>Percentage of EDA manpower allocated to each of the different EDA support tasks</u>	15
	III. Design Technology Strategy	
	<u>Characterization of overall EDA strategy</u>	17
	<u>Organization that configures and supports EDA system</u>	18
	<u>Organization that end-users rely on most frequently for EDA support</u>	18
	<u>Selection criteria for EDA tools</u>	19

IV. Impact of Interoperability

Frequency of occurrence of various EDA tool and interoperability problems	22
Impact of various EDA tool and interoperability problems on design cycle time	23
Percentage of end-user design time spent on interoperability tasks	26
Time required to bring up a new tool	27
Ranking of time consumed by various design process iterations loops	27
Ranking of number of iteration loops required by various design processes	27
Inter-vendor interoperability issues users are trying to resolve	28
Inter-vendor interoperability issues users have given up on resolving	28

C. Results of Survey (Large Companies)

I. Background Information on Survey Sample

Silicon design styles used	31
Complexity of IC/ASIC designs	32
Smallest process geometry for IC/ASIC designs	38
Operating system environment installed on EDA platforms	39
Hardware description languages used	40
Total employees per company	41

II. Design Technology Investment

Total number of EDA software developers and support engineers distributed throughout company	41
Total number of EDA software developers and support engineers and managers within central CAD group among companies that have a central CAD group	41
Total number of design engineers across company supported by EDA engineers	41
Total number of design groups across company supported by EDA engineers	41
Design Productivity	42
Investment per year per engineer	42
Allocation of total corporate EDA budget in 2001 and 2002	42
Percentage of EDA manpower allocated to each of the different EDA support tasks	43

III. Design Technology Strategy

Characterization of overall EDA strategy	44
Organization that configures and supports EDA system	45
Organization that end-users rely on most frequently for EDA support	46
Selection criteria for EDA tools	46

IV. Impact of Interoperability

Frequency of occurrence of various EDA tool and interoperability problems	49
Impact of various EDA tool and interoperability problems on design cycle time	50

Percentage of end-user design time spent on interoperability tasks	54
Time required to bring up a new tool	54
Ranking of time consumed by various design process iteration loops	54
Ranking of number of iteration loops required by various design processes	55

D. [Results Of Survey \(Computer Systems\)](#)

I. Background Information On Survey Sample

Silicon design styles used	57
Complexity of IC/ASIC designs	58
Smallest process geometry for IC/ASIC designs	63
Operating system environment installed on EDA platforms	65
Hardware description languages used	65
Total employees per company	66

II. Design Technology Investment

Total number of EDA software developers and support engineers distributed throughout the company	66
Total number of EDA software developers and support engineers and managers within central CAD group among companies that have a central CAD group	67
Total number of design engineers across company supported by EDA engineers	67
Total number of design groups across company supported by EDA engineers	67
Design Productivity	67
Investment per year per engineer	67
Allocation of total corporate EDA budget in 2001 and 2002	68
Percentage of EDA manpower allocated to each of the different EDA support tasks	68

III. Design Technology Strategy

Characterization of overall EDA strategy	70
Organization that configures and supports EDA system	71
Organization that end-users rely on most frequently for EDA support	71
Selection criteria for EDA tools	72

IV. Impact of Interoperability

Frequency of occurrence of various EDA tool and interoperability problems	75
Impact of various EDA tool and interoperability problems on design cycle time	76
Percentage of end-user design time spent on interoperability tasks	79
Time required to bring up a new tool	79
Ranking of time consumed by various design process iteration loops	79
Ranking of number of iteration loops required by various design processes	80

E. Results Of Survey (Semiconductors)

I. Background Information on Survey Sample

[Silicon design styles used](#)..... 82

[Complexity of IC/ASIC designs](#)..... 83

[Frequency of occurrence of various EDA tool and interoperability problems](#) 100

[Impact of various EDA tool and interoperability problems on design cycle time](#) 101

[Percentage of end-user design time spent on interoperability tasks](#) 104

[Time required to bring up a new tool](#) 104

[Ranking of time consumed by various design process iteration loops](#)..... 104

[Ranking of number of iteration loops required by various design processes](#)..... 105

F. Results Of Survey (Consumer Electronics)

I. Background Information on Survey Sample

[Silicon design styles used](#)..... 107

[Complexity of IC/ASIC designs](#)..... 108

[Smallest process geometry for IC/ASIC designs](#)..... 113

Operating system environment installed on EDA platforms	115
Hardware description languages used	115
Total employees per company	116
II. Design Technology Investment	
Total number of EDA software developers and support engineers distributed throughout the company	116
Total number of EDA software developers and support engineers and managers within central CAD group among companies that have a central CAD group	116
Total number of design engineers across company supported by EDA engineers	117
Total number of design groups across company supported by EDA engineers	117
Design Productivity	117
Investment per year per engineer	117
Allocation of total corporate EDA budget in 2001 and 2002	118
Percentage of EDA manpower allocated to each of the different EDA support tasks	118
III. Design Technology Strategy	
Characterization of overall EDA strategy	120
Organization that configures and supports EDA system	121
Organization that end-users rely on most frequently for EDA support	121
Selection criteria for EDA tools	122
IV. Impact of Interoperability	
Frequency of occurrence of various EDA tool and interoperability problems	125
Impact of various EDA tool and interoperability problems on design cycle time	126
Percentage of end-user design time spent on interoperability tasks	129
Time required to bring up a new tool	129
Ranking of time consumed by various design process iteration loops	129
Ranking of number of iteration loops required by various design processes	130
G. <u>Results Of Survey (Communications)</u>	
I. Background Information on Survey Sample	
Silicon design styles used	132
Complexity of IC/ASIC designs	133
Smallest process geometry for IC/ASIC designs	138
Operating system environment installed on EDA platforms	140
Hardware description languages used	140
Total employees per company	141
II. Design Technology Investment	
Total number of EDA software developers and support engineers distributed throughout the company	141

Total number of EDA software developers and support engineers and managers within central CAD group among companies that have a central CAD group	141
Total number of design engineers across company supported by EDA engineers	142
Total number of design groups across company supported by EDA engineers	142
Design Productivity	142
Investment per year per engineer	142
Allocation of total corporate EDA budget in 2001 and 2002	142
Percentage of EDA manpower allocated to each of the different EDA support tasks	143
III. Design Technology Strategy	
Characterization of overall EDA strategy	144
Organization that configures and supports EDA system	145
Organization that end-users rely on most frequently for EDA support	146
Selection criteria for EDA tools	146
IV. Impact of Interoperability	
Frequency of occurrence of various EDA tool and interoperability problems	149
Impact of various EDA tool and interoperability problems on design cycle time	150
Percentage of end-user design time spent on interoperability tasks	153
Time required to bring up a new tool	153
Ranking of time consumed by various design process iteration loops	153
Ranking of number of iteration loops required by various design processes	154
H. <u>Results Of Survey (Aerospace)</u>	
I. Background Information on Survey Sample	
Silicon design styles used	156
Complexity of IC/ASIC designs	157
Smallest process geometry for IC/ASIC designs	162
Operating system environment installed on EDA platforms	164
Hardware description languages used	164
Total employees per company	165
II. Design Technology Investment	
Total number of EDA software developers and support engineers distributed throughout the company	165
Total number of EDA software developers and support engineers and managers within central CAD group among companies that have a central CAD group	165
Total number of design engineers across company supported by EDA engineers	166
Total number of design groups across company supported by EDA engineers	166
Design Productivity	166
Investment per year per engineer	166
Allocation of total corporate EDA budget in 2001 and 2002	166

<u>Percentage of EDA manpower allocated to each of the different EDA support tasks</u>	167
III. Design Technology Strategy	
<u>Characterization of overall EDA strategy</u>	168
<u>Organization that configures and supports EDA system</u>	169
<u>Organization that end-users rely on most frequently for EDA support</u>	170
<u>Selection criteria for EDA tools</u>	170
IV. Impact of Interoperability	
<u>Frequency of occurrence of various EDA tool and interoperability problems</u>	173
<u>Impact of various EDA tool and interoperability problems on design cycle time</u>	174
<u>Percentage of end-user design time spent on interoperability tasks</u>	177
<u>Time required to bring up a new tool</u>	177
<u>Ranking of time consumed by various design process iteration loops</u>	177
<u>Ranking of number of iteration loops required by various design processes</u>	178
I. <u>Results Of Survey (Other)</u>	
I. Background Information on Survey Sample	
<u>Silicon design styles used</u>	180
<u>Complexity of IC/ASIC designs</u>	181
<u>Smallest process geometry for IC/ASIC designs</u>	187
<u>Operating system environment installed on EDA platforms</u>	188
<u>Hardware description languages used</u>	189
<u>Total employees per company</u>	190
II. Design Technology Investment	
<u>Total number of EDA software developers and support engineers distributed throughout the company</u>	190
<u>Total number of EDA software developers and support engineers and managers within central CAD group among companies that have a central CAD group</u>	190
<u>Total number of design engineers across company supported by EDA engineers</u>	191
<u>Total number of design groups across company supported by EDA engineers</u>	191
<u>Design Productivity</u>	191
<u>Investment per year per engineer</u>	191
<u>Allocation of total corporate EDA budget in 2001 and 2002</u>	191
